Safe Winter Driving Tips

Create an Emergency Kit

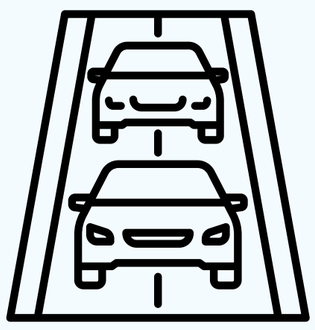

Prepare an emergency kit with:

- Non-perishable food and water for at least 3 days
- First aid supplies and medications
- Flashlights, batteries, and a battery-powered radio

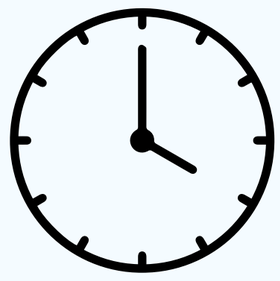

Check Your Vehicle Tires

- Make sure you have switched to winter tires, as they have better traction at freezing temperatures compared to all-season tires

Keep a Safe Distance

- Maintain double the usual distance as it allows for better reaction time in case of sudden stops or turns on slippery roads

Plan and Leave Early

- Give yourself plenty of time to reach your destination safely while driving through snowy roads

Remove Ice and Snow

- Clean your vehicle roof, mirrors, windows and lights before driving to avoid causing accidents

Change Your Vehicle Oil

- Make sure to use the right type of oil and keep the fuel tank filled to at least half to avoid any freezing issues with the fuel line
